

GIT HUB CLASS PROJECT

USN: 1RUA25BCA0019

PROJECT TITLE

STUDYFLOW

PURPOSE :

StudyFlow is a web-based academic productivity platform designed to help students manage their study tasks efficiently. The application integrates tools such as study timers, goal tracking, assignment management, and progress analytics into a single dashboard.

The purpose of this project is to create a simple yet effective digital system that helps students stay organized and improve their study habits.

The platform demonstrates the use of web development technologies such as HTML, CSS, and JavaScript to build an interactive user interface.

FUNCTIONALITIES :

Main Features

1. Dashboard

Displays an overview of study progress including active goals, completed tasks, and total study time.

2. Study Timer

Allows users to focus on study sessions using a countdown timer.

3. Assignments Section

Students can track pending assignments.

4. CGPA Calculator

Helps students estimate their academic performance.

5. Goals Section

Users can add and track study goals.

6. Calendar

Helps schedule study sessions and academic events.

CODE DEMONSTRATION & FRONTEND

HTML

Used to structure the webpage elements such as navigation bar, dashboard, and timer.

CSS

Used to design the user interface and make the layout visually appealing.

JavaScript

Used to add interactive features such as the study timer and dynamic updates.
